Using Simplio with eCommerce Platforms

Simplio3D can be integrated easily with known eCommerce platforms such as: WooCommerce, Shopify, Magento, Squarespace, Opencart and PrestaShop. By using the Simplio SEL platform, companies can integrate a customized product configurator with an ecommerce website in multiple ways.

This is possible with the help of the available SEL library found on Simplio that can permit at a lower cost to customize and integrate with an ecommerce website. Suitable for medium and large projects where companies want something more specific for their needs which are not found in standard versions at affordable cost.

Levels of Integrations

The most common integration with ecommerce platforms based on our experience:

**LEVEL 1 INTEGRATION:** directly embedding a product configurator into a single page and using the ecommerce’s checkout protocol. **LEVEL 2 INTEGRATION:** advanced integration by using the ecommerce’s product page.
Level 1 Integration

In the website we create a webpage from where users will access and use the product configurator. The product configurator can be embedded using an iFrame. The orders from the configurator will be redirected to the ecommerce checkout page.

SERIES A: BATHROOM VANITY

60" SERIES A DOUBLE WITH FULL HEIGHT DOORS

$611.00
